It is most probably a transcription terminating factor. Binds to the 3' termini of virtually all nascent polymerase III transcripts. It is associated with precursor for the polymerase III transcripts including tRNA and 4.55, 55 of RNA polymerase III transcripts including tRNA and 4.55, 55

   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

PATHWAY: Galactose metabolism; first step.

DISEASE: Defects in GALKI are the cause of galactosemia II

DISEASE: Defects in GALKI are the cause of galactosemia II

[MIM:230200], an autosomal recessive deficiency characterized be congenital cataracts during intancy and presenile cataracts in adult population. The cataracts are secondary to accumulation c galactitol in the lenses.

SIMILARITY: Belongs to the GHMP kinase family. GalK subfamily.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    HGNC:4118; GALK1.

    -!- PATHWAY: Lignin biosynthesis.
    -!- PATHWAY: Phenylpropanoid metabolism; second step.
    -!- SIMILARITY: Belongs to the cytochrome P450 family.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                SEQUENCE FROM N.A.                                                        PTM: Phosphorylated (Probable).
MISCELLANEOUS: There are two forms of La, LaA and LaB, in
SIMILARITY: HIGH, TO MAMPALLAN LA PROTEIN.
SIMILARITY: Contains 1 RNA recognition motif (RRM) domain.
                                                                                                               FUNCTION: La protein plays a role in the transcription of RNA polymerase III. It is most probably a transcription termination factor. Binds to the 3' termini of virtually all nascent polymerase III transcripts (By similarity).
SUBCELLULAR LOCATION: Nuclear (Probable).
DEVELOPMENTAL STAGE: Barely detectable in stage I/II occytes, accumulate in stage III/IV occytes, then exhibit a roughly constant steady state level in mature occytes, eggs, and early
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             S33817; S33817

PTM: Phosphorylated (By similarity).
SIMILARITY: Contains 1 RNA recognition motif (RRM) domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  FUNCTION: La protein plays a role in the transcription of RNA polymerase III. It is most probably a transcription termination factor. Binds to the 3' termini of virtually all nascent polymerase III transcripts. It is associated with precursor form of RNA polymerase III transcripts including tRNA and 4.58, 58,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    11
